## **INTRODUCTION**

This manual has been designed to provide you with the tools necessary to set up your merchant's equipment for use with your CrossCheck products.

Within this guide you will find a comprehensive explanation on how to best set up your equipment with use with your CrossCheck product. We understand that there are a lot of different terminals, readers and imagers on the market. We hope to give you a better understanding of how each works.

In each section we have also included programming requests to use in order to get your merchant's software as well as hardware up to date so it may be best utilized. And, of course, should any problems arrive we have included the contact information through which you may reach Tech Support.

Hopefully with use of this guide you will be able to solve all your merchant's hardware problems and answer all their questions.

Please use this as a resource but know that we are also available to assist you with any suggestions simply by calling our Tech Support line: (800) xxx-xxxx from 6:00 AM (PST) to 5:00 PM (PST) Monday through Friday.

## **ABOUT CROSSCHECK**

As you may know, CrossCheck has been a respected Value Added Resource for the ISO community for over twenty years.

Founded in 1983, CrossCheck provides check approval services to thousands of merchant locations across the country and handled more than 30.4 million transactions in 2003. CrossCheck is currently the third largest check guarantee provider overall and is the largest privately owned check approval and guarantee company in the nation.

That independent spirit is part of what makes CrossCheck unique in the marketplace. Our philosophy is "Say Yes to Checks." We believe that allowing merchants to accept more checks; creatively, securely, efficiently and safely, is ultimately better for their business. Along with our different services CrossCheck has developed several enhancements to cover checks that other check guarantee companies don't offer. We even approve checks our competitors decline.

In today's marketplace merchants can accept checks in a variety of ways. CrossCheck provides payment services for traditional retail stores, E-commerce merchants, merchants taking checks over the phone or those that need electronic check conversion.

CrossCheck believes in the Independent Sales Representative and that is why we won't compete with you. We specialize in check services... that's it. CrossCheck doesn't offer merchant card services or gift card services and we are not contractually obligated to support any particular piece of POS equipment. This gives you the freedom to present the equipment that fits the merchant's needs best.

CrossCheck also believes in paying you on time, every time, whether you sign one agreement a month or one thousand. CrossCheck offers you a comprehensive compensation program and offers you the flexibility to change that compensation on a per sale basis. This will allow you to maximize your earning potential for each agreement submitted.

## CHECK GUARANTEE

So what is check guarantee? Simply put, a check guarantee service enables a merchant to accept a check, authorize it in seconds, and should the check be returned for payment, submit the check for claims processing and reimbursement for the face amount of the check (assuming the item conforms to certain procedural and warranty requirements).

Think about that for a moment...with this service in place merchants can feel more comfortable accepting a check from someone they don't know, someone that lives out of the area or out-of-state, even a check from a customer that lives in Canada, Guam, or any U.S. territory. Merchants can accept checks from customers that don't have a credit card or available credit. Merchants can accept checks any time of the day or night.

Check approval is fast, easy and affordable.

Compare that with some of the other options merchants have available to them:

**Verification services:** Without guarantee, returned checks become the merchant's responsibility to collect.

**Collection services:** Some collection agencies will only pay 50% of the value of the check and that's only if they collect on it.

**Small Claims Court:** Think of the time and money a merchant might spend to sue their customers and what effect that might have on their business reputation in the community.

**Internal collections:** Most merchants don't have the time or the staff to track down bad check writers. Many of the best collection agencies report that they only collect around 50% of the checks assigned to them.

## STANDARD CHECK GUARANTEE

Standard Check Guarantee is CrossCheck's flagship program. Commonly known in the industry as "traditional" check guarantee or "paper" guarantee, it is still the most versatile and pervasive way to guarantee checks.

Designed for maximum flexibility and ease of use, the Standard check guarantee program will suit the needs of most merchants while still providing you a viable, dynamic addition to your sales presentation.

This service works with the majority of point-of-sale terminals and check readers and CrossCheck is constantly working to certify new equipment that comes onto the market. In addition, merchants can elect to use non-terminal based approval methods such as an automated phone system and the Internet.

Standard check guarantee allows you to present multiple enhancement options to your prospects, enabling you to customize a program to fit their business needs. In many cases, these enhancements have been created by CrossCheck and are unequalled in the industry.

Our Standard check guarantee service provides a merchant with protections against bad check losses. Merchants using this service deposit all approved checks into their bank account and, should any approved item be returned as unpaid, they will be reimbursed for the face amount of that check provided they meet the warranty guidelines.

CrossCheck's also offers Premium Approval allows merchants to accept virtually every check presented. Our competition typically declines 8%-10% of all checks. Those declines represent lost revenue to the merchant.

We are proud to provide the highest percentage of approvals in the industry. Our Premium Approval feature guarantees *at least* 50% fewer declines than our competition. If we don't, we'll pay the set up fees (up to \$200.00 per location) to switch the merchant back to their old service. In over 20 years, we've never had to pay that fee!

## CROSSCHECK CONVERSION PLUS

CrossCheck Conversion Plus offers a convenient, efficient and secure way to manage future check payment systems while providing benefits for the merchant. This service allows paper checks to be converted to an Electronic Funds Transfer (EFT) at the point-of-sale. Check Center automatically captures and records information from approved transactions and prepares them for automatic submission to the ACH.

This process eliminates the merchant's need to prepare check deposits and deliver them to their financial institution. In addition, Check Center offers guarantee coverage along with the convenience of conversion.

Unlike our competitors, CrossCheck Conversion Plus provides for conversion of business checks, an important feature for many merchants.

This program will work with many of the point-of-sale terminals, check imagers and check readers found in the marketplace today and Check Center is constantly working to certify new equipment as it emerges.

### How it works

- Consumer writes a check to purchase products and/or services
- Merchant accepts the check, reviews it and confirms that the required information is on the check
- The merchant will scan the consumer's check and enter the pertinent transaction/check information
- **Non-Imaging program:** The MICR is scanned
- **Imaging program:** The image will be transmitted and stored in a file at CrossCheck
- A receipt prints, which the consumer is required to sign
- **Non-Imaging program:** The check must be stamped VOID and the merchant mails the check into CrossCheck
- **Imaging program:** The check must be stamped VOID and returned to the consumer
- Check Center debits the consumer's account for the transaction amount
- Typically the merchant's account will be credited within 48 hours
- Merchants may view their transaction activity online at the Check Center Website

## **EQUIPMENT COMPATIBILITY CHARTS**

Because of the wide variety of terminals available on the market, it is necessary to look at them individually to learn how they are set up. The following pages contain a chart that will show you which services each terminal supports. Make sure that the terminal your merchant has does in fact support the CrossCheck service that they wish to use.

# CrossCheck Equipment Manual

|   | Standard Manual | Standard Multiple Check | Standard MICR Check Reader | Conversion (ECC) Imaging | Conversion (ECC) Non-Imaging | Check Imager Supported  | Check Reader Supported         |

## LIPMAN/NURIT TERMINALS

### **CrossCheck supports the following Terminals:**

2080, 2085, 2085+,2090, 3000, 3010, 3020, 8000, 8100, 8320

CrossCheck supports processing on the wireless capable units, however an analog phone line is required for CrossCheck service.

### **Nurit/Lipman Process Flow**

- 1) Fill out top portion of Lipman Nurit STPR form.
- 2) Follow written instruction on STPR form for obtaining application and version information and fill in appropriate fields on STPR form.
- 3) Follow written instructions on STPR form for obtaining EDC setup information.
- 4) Please write the merchant's store number on the paper prior to faxing to CrossCheck. Fax the EDC slips and the STPR form to CrossCheck Technical Support 800 211 8119. Please include a cover sheet that provides information as to who has the terminal in their physical possession and who CrossCheck can contact for the download.
- 5) Allow 2 business days to complete the file. Once the file is built by CrossCheck, CrossCheck will contact the above referenced individual for a download.

Download Time: Varies, Approximately 15-20 minutes

(on bottom of unit)

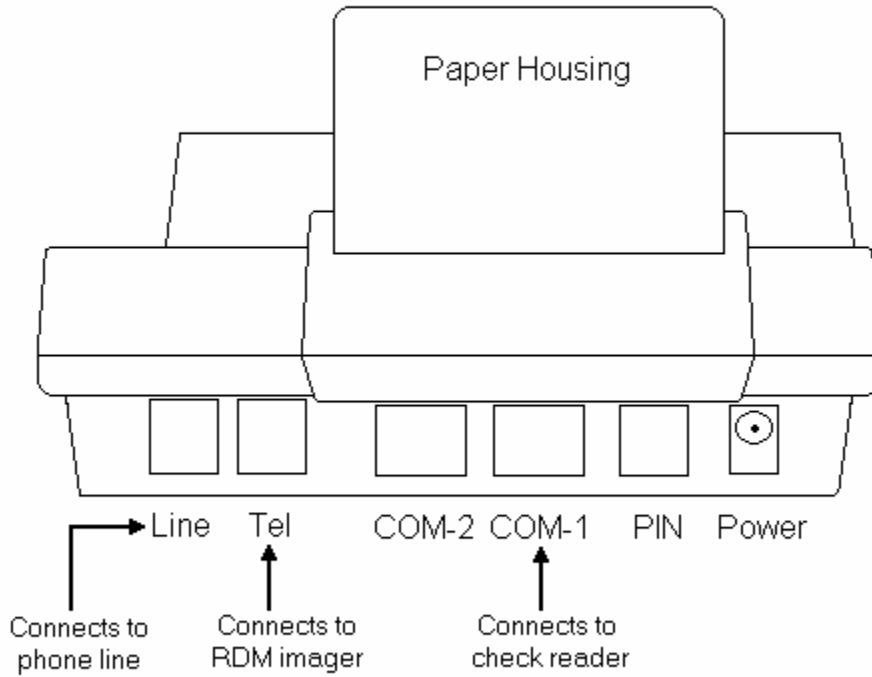

### Retrieving EDC Setup Slips

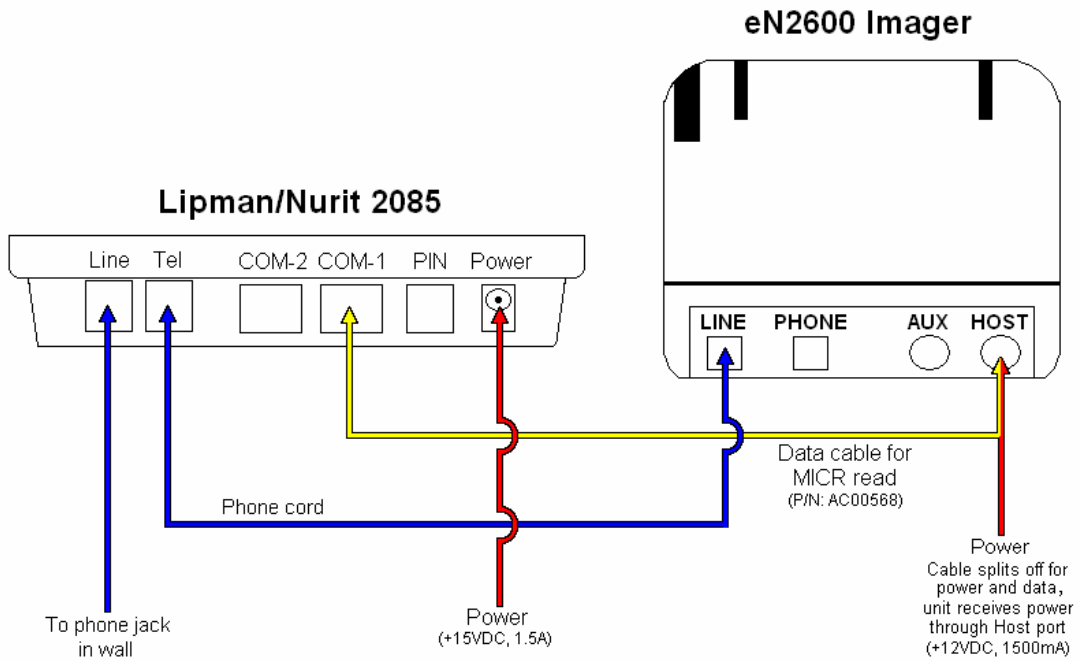

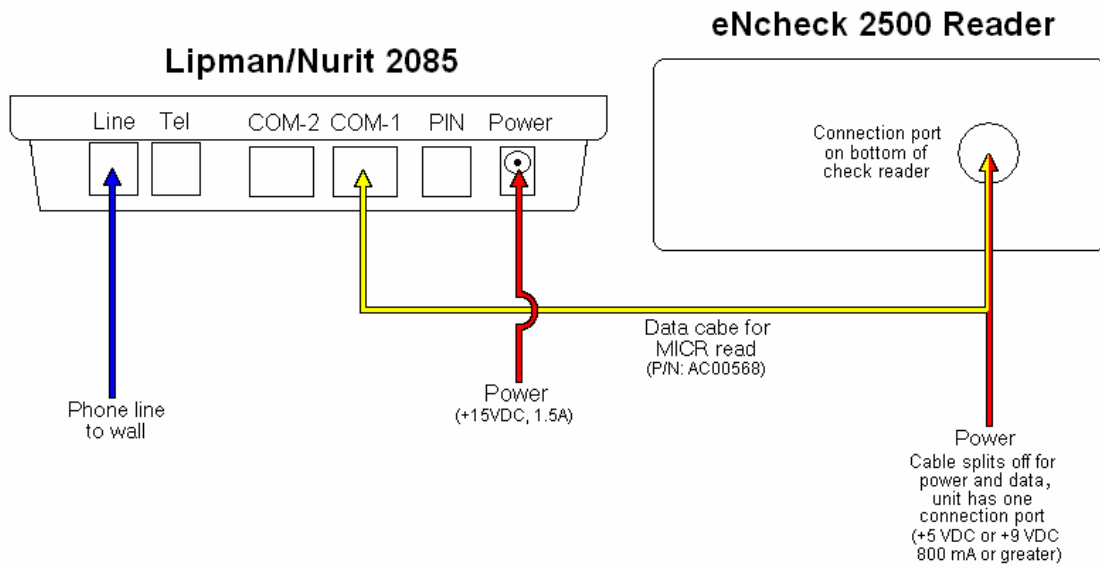

From the main screen:

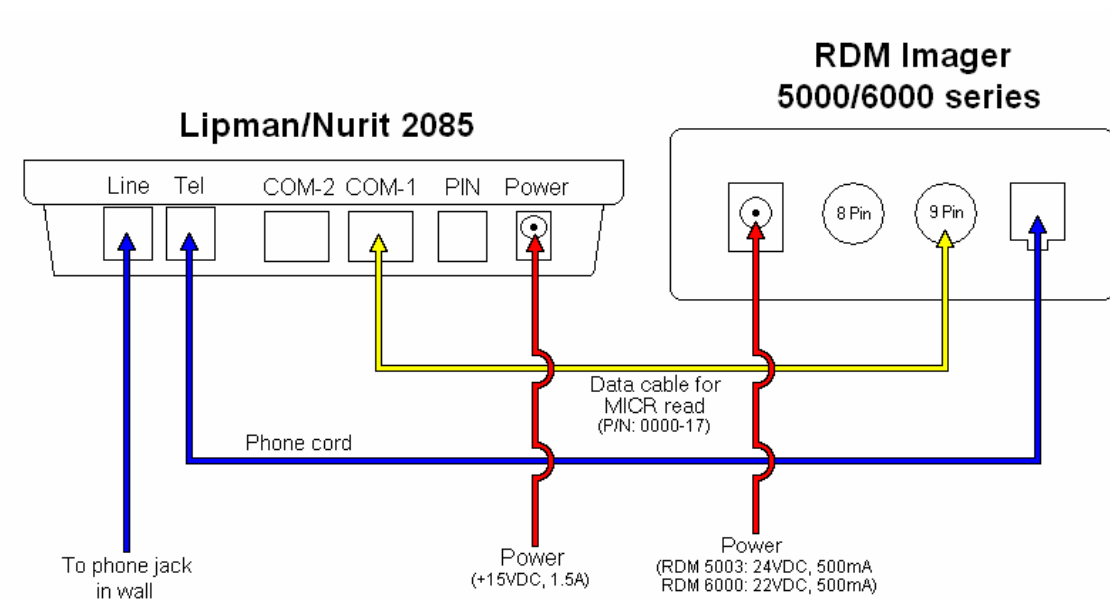

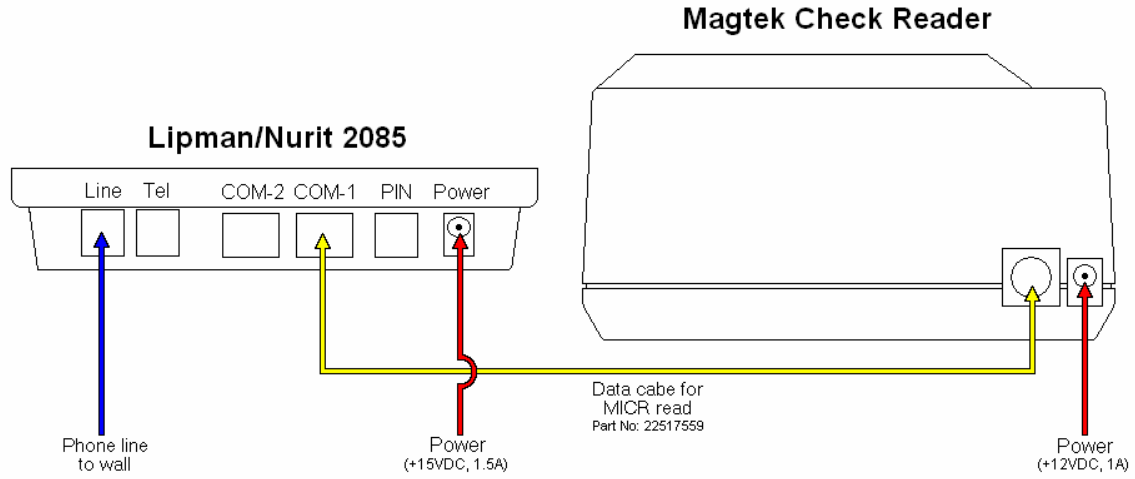

- Press **MENU/ESC**
  - ~ If the terminal asks for a password, put in the current Date/Month **DD/MM ENTER**
- Press **4, 3**
  - ~ The terminal should print, once finished, proceed.
- Press **MENU/ESC, 3, 9**
  - ~ The terminal should print some more.
- Press **MENU/ESC, MENU/ESC** (i.e. twice)
  - ~ The terminal should be on it's main screen now
  - ~ Have the merchant fax the earlier printed slips to your attention.
  - ~ **NOTE:** It is best that the merchant **COPY** the slips onto normal paper before attempting to fax.

## HYPERCOM TERMINALS

### **CrossCheck supports the following terminals:**

All T7 Models (except T7Q), T7Plus, ICE 5500 or great, ICE 5700/5700 Plus  
Support varies per processing platform / network.

### **Hypercom Process Flow:**

Please note bankcard processors must program all Hypercom terminals. The procedure to complete this varies by processor.

1. Fill out the STPR form and fax to CrossCheck at 800-211-8119.
2. CrossCheck will contact the bankcard processor to have CrossCheck added to the bankcard file.
3. Once CrossCheck is added by the processor, CrossCheck will contact the merchant.
  - a) CrossCheck will initialize and test the equipment.
  - b) If the processor is unable to add CrossCheck, due to compatibility issues, program limitations, memory restrictions, etc. CrossCheck will provide alternate solutions to the merchants where applicable.

Welch Allen: Scan Team 8310.

### **Readers:**

Most readers need to be configured. Call Sales Support to receive configuration checks at 800-843-7354.

The eN-Check 2500 does not use configuration checks but must be configured via special software. If the reader is not configured by the processor or equipment vendor, the reader must be mailed into CrossCheck. The reader must include the power cord and a note in the box that details the merchant store number and a specific return address. Failure to include the power cord, store number or return address may delay the return of the equipment.

### **Imagers.**

Most imagers can be plugged in right out of the box (no configuration necessary).

Please note all imagers require their own analog phone line.

| Check Reader/Imager Mfg & Model   | Programmed/Config'd Via:   |
|---|--|
| <b>Verifone</b>   |  |
| CR600   | Config Checks  |
| CR1000i   | Ok out of Box  |
